To Whom It may concern,

EWWF Systems Ltd is BC second largest manufacturer and distributors of bulk windshield washer fluid and Anti-freeze. We currently run a fleet of 7 trucks which are a range of 1 ton to 5 ton Fords, Internationals and Hino diesel delivery vehicles. We run a fairly consistent delivery route and were eager to find a solution to our fuel consumption problem. Our goal was to reduce our fuel usage and maintenance intervals. After carefully researching the various products available on the market our company decided to move forward with Lubri-lab.

Lubri-Lab recommended we use lubri-lab Xtra diesel for improving our fuel consumption in our diesel trucks and they suggested we use Lubri-lab Integral 7 as an oil additive to reduce our oil changes and improve lubrication within the engine. Apart from the long term potential positive effects of using this product, we only compared fuel bills and the reduction of oil changes as an immediate savings of money for our company. The following was observed by our drivers.

- We gained on the average 70 km per tank of fuel in distance.
- Reduced our stops at gas stations.
- There is a \$125 savings for every oil change we were able to skip and this includes the cost of Integral 7.
- Trucks horse power increased.

We believe our overall savings in fuel to our company was 9% in the past 6 months. We highly recommend these products for any company in the delivery business or fleet operators.
