

RESIN OFF

RESIN CLEANER

DESCRIPTION

RESIN OFF is a powerful cleaner which dissolves wood resin over steel and carbide blades.

In the forest industry, when in contact with blades and other parts, resin poses a problem. It becomes very difficult to remove, causing high replacement costs.

RESIN OFF:

- Dissolves the resin without scratching
- Water base products
- Inherently biodegradable
- Cleans rust parts
- Cleans soot and dust from industrial clothing

BENEFITS

Resin from trees is very tacky and in most cases, it is impossible to clean properly without sandblasting or using solvents. With **RESIN OFF**, it is not necessary to use any products harmful to the environment or to the parts. Laboratory tests show **RESIN OFF** is able to clean parts that previously were considered unusable due to the buildup of resin.

RESIN OFF can be used on:

- Saw blade (steel, carbide teeth, serrated)
- Planner knife
- Skinner knife
- Grinder knife
- Sharpener
- Chain saw sprocket and cutting chain

APPLICATION AND DIRECTIONS:

In the case of blades with resin build-up, soak the blades in **RESIN OFF** at full strength, rinse with water and wipe dry. For continuous protection, spray regularly with half strength to reduce resin build-up.

The above information is true and precise to the best of our knowledge. All recommendations or suggestions are made without warranty since the circumstances and conditions are beyond our control.
